Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

(Withdrawn) A method of making an adhesive article comprising the steps
 of:

providing a release liner comprising a moldable layer, a release surface and a back surface;

applying a pattern of a non-adhesive material to the release surface of the release liner;

embedding the non-adhesive material into the release liner; and transferring an adhesive layer having a front and back surface and end edges onto the release liner, wherein the front surface of the adhesive layer is adhered to the release surface of the release liner.

- 2. (Withdrawn) The method of claim 1 further comprising applying a facestock to the back surface of the adhesive layer.
- 3. (Withdrawn) The method of claim 1 wherein the adhesive layer has a facestock adhered to the its back surface.
- 4. (Withdrawn) The method of claim 1 wherein the pattern comprises a plurality of dots, lines or combinations thereof.
- 5. (Withdrawn) The method of claim 1 wherein the pattern comprises a plurality of closely spaced parallel lines.
- 6. (Withdrawn) The method of claim 1 wherein the applying step comprises printing, vacuum metalization, or sputtering.
- 7. (Withdrawn) The method of claim 1 wherein the applying step comprises flexographic printing.
- 8. (Withdrawn) The method of claim 1 wherein the applying step comprises gravure printing.
- 9. (Withdrawn) The method of claim 1 wherein the applying step comprises laser printing.

- 10. (Withdrawn) The method of claim 1 wherein the release surface of the release liner has a Sheffield roughness of greater than about 50.
- 11. (Withdrawn) The method of claim 1 wherein the release surface of the release liner has a matte finish.
- 12. (Withdrawn) The method of claim 1 wherein the release liner has a patterned release surface.
- 13. (Withdrawn) The method of claim 1 wherein the applying step and the embedding step occur simultaneously.
- 14. (Withdrawn) The method of claim 1 wherein the embedding step comprises applying heat and pressure to the non-adhesive material and the release liner with a textured roller.
- 15. (Withdrawn) The method of claim 1 wherein the non-adhesive material comprises printing ink.
- 16. (Withdrawn) The method of claim 1 wherein the non-adhesive material comprises a UV curable ink.
- 17. (Withdrawn) The method of claim 1 wherein the non-adhesive material comprises coalescing ink.
- 18. (Withdrawn) The method of claim 1 wherein the non-adhesive material comprises a porous non-adhesive material.
- 19. (Withdrawn) The method of claim 18 wherein the porous non-adhesive material comprises an elastomer.
- 20. (Withdrawn) The method of claim 1 wherein the embedding step comprises applying heat and pressure to the non-adhesive material and the release liner using a roller or platen having an incised pattern in its surface.
- 21. (Withdrawn) The method of claim 1 further comprising applying randomly distributed non-adhesive particulate material onto the release surface of the release liner prior to the embedding step.

- 22. (Withdrawn) The method of claim 1 further comprising applying a second pattern of non-adhesive material to the release surface of the release liner, wherein said second pattern of non-adhesive material has a thickness greater than that of the first pattern of non-adhesive material.
- 23. (Withdrawn) The method of claim 1 wherein said adhesive is a pressure sensitive adhesive.
- 24. (Withdrawn) The method of claim 1 wherein said adhesive is a heat-activated adhesive.
- 25. (Withdrawn) The method of claim 1 wherein the pattern comprises a plurality of lines, wherein at least 50% of the lines intersect the end edges of the adhesive layer.
- 26. (Withdrawn) The method of claim 1 further comprising applying a second release liner to the back surface of the adhesive layer.
- 27. (Withdrawn) The method of claim 1 wherein the back surface of the release liner has a release coating thereon.
- 28. (Withdrawn) The method of claim 27 further comprising applying a second adhesive layer to the back surface of said release liner, said front surface of said second adhesive layer in contact with the back surface of the release liner.
- 29. (Withdrawn) The method of claim 28 further comprising applying a facestock to the back surface of one of said adhesive layers.
- 30. (Withdrawn) The method of claim 28 wherein said second adhesive layer has a facestock adhered to its back surface.
 - (Previously presented) An adhesive article comprising:
 a release liner having a top release surface and a bottom surface;
- a continuous layer of adhesive having a bottom surface and a top surface and end edges, wherein the bottom surface of the adhesive is adhered to the top release surface of the release liner; and
- a pattern of non-adhesive material forms embedded into the top release surface of the release liner, said non-adhesive material forms comprising a polymeric ink and having a top surface, wherein the top surface of the non-adhesive material forms is even with or below the plane of the top release surface of the release liner.

- 32. (Previously presented) The adhesive article of claim 31 wherein a facestock is applied to the top surface of the adhesive layer.
- 33. (Original) The adhesive article of claim 31 wherein the non-adhesive material forms have an average thickness of about 30 nanometers to about 100μ .
- 35. (Currently amended) The adhesive article of claim 31 wherein the pattern of non-adhesive material forms is applied by printing comprises a plurality of printed non-adhesive material forms.
- 36. (Original) The adhesive article of claim 31 wherein the non-adhesive material comprises at least one UV curable ink.
- 37. (Original) The adhesive article of claim 31 wherein the pattern of non-adhesive material forms comprises a plurality of dots, lines or combinations thereof.
- 38. (Original) The adhesive article of claim 31 wherein the pattern of non-adhesive material forms comprises a plurality of lines having an average width of from about 12 μ to about 250 μ and an average thickness of from about 30 nanometers to about 100 μ .
- 39. (Original) The adhesive article of claim 31 wherein the pattern of non-adhesive material forms comprises a plurality of lines, and wherein at least 50% of the lines intersect the end edges of the adhesive layer.
- 40. (Original) The adhesive article of claim 31 wherein the pattern of non-adhesive material forms comprises a plurality of lines, and wherein the lines form a grid pattern.
- 42. (Original) The adhesive article of claim 31 wherein the adhesive layer comprises a pressure sensitive adhesive.
- 43. (Original) The adhesive article of claim 31 wherein the adhesive layer comprises a heat-activated adhesive.
- 46. (Original) The adhesive article of claim 31 wherein the non-adhesive material comprises a coalesced ink.
- 47. (Original) The adhesive article of claim 31 wherein the non-adhesive material comprises a porous non-adhesive material.

- 48. (Original) The adhesive article of claim 47 wherein the porous non-adhesive material comprises an elastomer.
- 49. (Previously presented) The adhesive article of claim 31 wherein the top surfaces of the non-adhesive material forms are below the plane of the top release surface of the release liner.
- 50. (Original) The adhesive article of claim 31 wherein the release surface of the release liner has a textured surface.
- 51. (Original) The adhesive article of claim 50 wherein the release surface has a random texture.
- 52. (Original) The adhesive article of claim 50 wherein the release surface has a patterned finish.
- 53. (Previously presented) The adhesive article of claim 50 wherein the bottom surface of the adhesive layer has a textured surface that is complimentary to the textured surface of the release liner.
- 54. (Previously presented) The adhesive article of claim 31 further comprising a second release liner adhered to the top surface of the adhesive.
- 55. (Previously presented) The adhesive article of claim 31 wherein the bottom surface of the release liner has a release coating thereon.
- 56. (Previously presented) The adhesive article of claim 55 further comprising a second adhesive layer having a top and bottom surface adhered to the release liner, the top surface of the second adhesive in contact with the bottom surface of the release liner.
- 57. (Previously presented) The adhesive article of claim 56 further comprising a facestock adhered to the top surface of the first adhesive layer or the bottom surface of the second adhesive layer.
- 58. (Previously presented) The adhesive article of claim 56 further comprising a facestock adhered to the bottom surface of the second adhesive layer.
 - 59. (Currently amended) An adhesive article comprising: a release liner having a release surface and a bottom surface;

a continuous layer of adhesive having a bottom surface and a top surface and end edges, wherein the bottom surface of the adhesive is adhered to the release surface of the release liner;

a pattern of non-adhesive material forms embedded into the release surface of the release liner, wherein the non-adhesive material forms comprise a polymeric ink and wherein the top surface of the non-adhesive material forms is even with or below the plane of the release surface of the release liner; and

a facestock adhered to the top surface of the adhesive layer, wherein the thickness of the non-adhesive material forms is sufficient enough to cause to result in deformation of the facestock upon application of the adhesive article to a substrate.

60. (Currently amended) An adhesive article comprising: a release liner having a release surface and a back surface; a continuous layer of adhesive having a front surface and a back surface and

end edges, wherein the front surface of the adhesive is adhered to the release surface of the release liner; and

a pattern of vacuum metalized or sputtered <u>deposits of</u> non-adhesive material forms embedded into the release surface of the release liner, said non-adhesive material forms having a top surface.

- 61. (Previously presented) The adhesive article of claim 60 wherein a facestock is applied to the back surface of the adhesive layer.
- 62. (Previously presented) The adhesive article of claim 60 wherein the pattern of non-adhesive material forms comprises a plurality of dots, lines or combinations thereof.
- 63. (Previously presented) The adhesive article of claim 60 wherein the pattern of non-adhesive material forms comprises a plurality of lines having an average width of from about 12 μ to about 250 μ , and an average thickness of from about 30 nanometers to about 3000 nanometers.
- 64. (Previously presented) The adhesive article of claim 60 wherein the pattern of non-adhesive material forms comprises a plurality of lines, and wherein at least 50% of the lines intersect the end edges of the adhesive layer.
- 65. (Previously presented) The adhesive article of claim 60 wherein the pattern of non-adhesive material forms comprises a plurality of lines, and wherein the lines form a grid pattern.

- 66. (Previously presented) The adhesive article of claim 60 wherein the non-adhesive material forms have an average thickness of about 30 to about 3000 nanometers.
- 67. (Previously presented) The adhesive article of claim 60 wherein the adhesive layer comprises a pressure sensitive adhesive.
- 68. (Previously presented) The adhesive article of claim 60 wherein the adhesive layer comprises a heat-activated adhesive.
- 69. (Previously presented) The adhesive article of claim 60 wherein the release surface of the release liner has a textured surface.
- 70. (Previously presented) The adhesive article of claim 69 wherein the release surface has a random texture.
- 71. (Previously presented) The adhesive article of claim 69 wherein the release surface has a patterned finish.
- 72. (Previously presented) The adhesive article of claim 69 wherein the lower surface of the adhesive layer has a textured surface that is complimentary to the textures surface of the release liner.
- 73. (Previously presented) The adhesive article of claim 60 further comprising a second release liner adhered to the back surface of the adhesive.
- 74. (Previously presented) The adhesive article of claim 60 wherein the back surface of the release liner has a release coating thereon.
- 75. (Previously presented) The adhesive article of claim 74 further comprising a second adhesive layer having a front and back surface adhered to the release liner, the front surface of second adhesive in contact with the back surface of the release liner.
- 76. (Previously presented) The adhesive article of claim 75 further comprising facestock adhered to the back surface of the second adhesive layer.
- 77. (Previously presented) The adhesive article of claim 75 further comprising a facestock adhered to back surface of the second adhesive layer.
